Compare public AI data buyer programs

Match the program to the asset you can authorize. An open intake shows what a provider is looking for. Written terms set the rights, price and payment for a specific contribution.

Program and asset	What the provider publicly describes	First diligence question
Scale Data Partnerships Company records	Structured, de-identified workflows from established operators. Listed sectors include field services, freight and property management.	Which approved fields and workflow packages can leave the source environment?
Appen enterprise data Company records	Operational documents, decision and escalation records, and systems of record. Describes sample approval.	Which sample gets reviewed, and what proof supports the final dataset?
Troveo business data Company records	Operational exports and other data products prepared and licensed under agreed terms.	Which rights, deductions and payment reporting apply to your export?
micro1 company data Company records	De-identified operational data used to develop environments for AI agents.	What workflow and verified outcome does the buyer need?
micro1 trade recording New capture	Paid capture for approved tasks, including examples of trade work.	Is the project open to you, and who can approve the filming?
Troveo media licensing Existing footage	Rights-controlled footage libraries for AI training. Separate from its business-data intake.	Which clips and rights are eligible, and what triggers payment?

Bring one testable example

Describe one decision, the evidence available at the time, and the outcome a reviewer can verify. Use a fabricated example to explain the structure in a first conversation. Agree on the rights and handling of any real records separately.

Before sharing a sample, verify source authority, exclusions, retention, permitted model uses, acceptance and the payment trigger.

Describe an existing dataset · Describe a new collection
