Plan a trade data sample with a mock-up

Use an approved tabletop model or independently drawn example. The practice question below asks which wall cavity a photo shows and what it verifies before cover.

Practice artifact	Record with it	Expected answer
CAV-A · before cover	Training label, photo direction, observation stage and reviewer confirmation.	This view supports an observation about CAV-A at that stage.
CAV-A · after cover	A second authorized view showing the same label and the later stage.	The photo shows the covered section. It cannot reveal the hidden material by itself.
CAV-B · lookalike	An obscured label and no approved cross-reference.	Ask for an identifiable view or a verified reference before using the image.

Set up your own practice sample

Task and evidence you can show _____

Allowed props and people _____

What must stay out of frame? _____

Who checks the answer and approves the sample? _____

Before recording

Confirm rights to the setting, participants, props, drawings and images. Keep the work offline and safe, away from live operations. Use a qualified reviewer and keep equipment, building and safety decisions outside the task.
