Plan a farm, forest or fishery data sample

Choose one decision and an example a reviewer can verify. Start with a practice setup or invented records. Ask the buyer what it needs before releasing source files or precise locations.

If you have…	First sample	Check before sharing
Farm imagery or equipment logs	A mock planting pass with verified planting state and one pass with the tool raised.	Confirm access and reuse with the grower, contractor and equipment platform. Replace field coordinates and operator identities.
Nursery or timber records	A fictional seed lot split into two nursery lots, with one verified transfer and one unresolved link.	Clear site, nursery and seed-source rights. Remove precise collection locations, contract terms and restricted species information.
Fishing video or trip reports	A staged clip with a tracked prop that reappears after an obstruction, or an invented trip amendment.	Check the monitoring agreement and any restrictions on access and reuse. Remove crew and vessel identifiers, and use invented fishing locations.

Write a one-line brief

Decision and supporting evidence _____

Permission owners and excluded fields _____

Who verifies the answer? _____

Use demand evidence to choose the next step

A workplace recording listing shows the settings a program names. A research project shows a technical use. Get a specific brief, acceptance criteria and written terms before committing time or offering real material.
