Plan a health workflow sample

Use a closed training room, inert props and consenting adult staff. The example records setup and visible item handling.

Take or evidence	What the reviewer checks	Expected label
SETUP-01 · Wide view of a practice tray and two marked props.	Read both labels and identify the reference positions.	Setup verified at the wide view timestamp.
TAKE-A · First-person retrieval and placement.	Both props and final locations remain visible. Record the event times.	Placement supported by visible evidence.
TAKE-B · One label is hidden during placement.	Score the visible motion and flag the missing label separately.	Identity unresolved. Recapture the obstructed step.

Plan the workflow and permissions

Task, props and approved location _____

Visible steps and what requires recapture _____

Media owner, adult performer and permitted AI use _____

Independent reviewer and evidence key _____

Before sharing

Use no patients, service recipients, minors, clinical screens or actual records. Keep incidental speech and identifiers out. Confirm the buyer's brief and obtain documented permission for the location, performers and footage. Route any real-data proposal through separate privacy and compliance review.
