Record a repair task sample

Work with an unpowered training fixture, inert parts and a cleared filming space. Record what the reviewer can actually see.

Shot or take	What the clip shows	Reviewer label
Setup · FIX-02 and two inert parts on a marked work surface.	Both part markings, initial fixture state and expected view.	Setup visible. Source is the original wide shot.
Take A · Select PART-B, align it and show the seated position.	The hand selects the correct part and the end state stays in frame.	Selection and seating supported at the annotated times.
Take B · The hand obscures the contact area at the end.	The part is visible at selection. The final contact area is hidden.	End state unverified. Request a clearer take.

Plan your capture

Task, fixture and part identifiers _____

Views and observable start / end state _____

Missing evidence that requires recapture _____

Recording owner, performer and location permissions _____

Before sharing

Confirm the buyer's task brief, camera and sensor requirements, and annotation schema. Use shop-owned items and exclude customer property, proprietary screens, background people and incidental speech. Record the allowed use and reviewer for each take.
