Plan a retail stocking sample

Stage a stock check with original labels and a separate answer key. Keep the observed shelf movement and the inventory record distinct.

Mock input	What to verify	Expected label
Case A card shows six units of SKU A. Case B quantity is missing.	Match the written count to the correct case and product.	Case A count documented. Case B count unknown.
TAKE-A shows the label check and placement of two units.	Identify the visible product and count. Record the event times.	Two units of SKU A visibly placed.
TAKE-B hides the label. A separate mock ledger records two units.	Record the ledger amount and flag what the video cannot establish.	Ledger records two. Product identity in TAKE-B unresolved.

Plan the workflow and permissions

Product, package level and known quantity _____

Shot list, visible evidence and missing fields _____

Independent inventory record and reviewer _____

Media owner, staff consent and allowed use _____

Before sharing

Use original props and an approved site with consenting adults. Exclude shoppers, receipts, supplier-only records and store security details. Confirm the buyer brief, annotation requirements and rights before collecting more.
